

Reliable Foliar Fertilization, with Extra Manganese!

Every drop of ENC + Mn Xtra provides balanced nutrition for higher-yielding, higher-quality crops.

This unique formulation includes the major elements—N, P & K—plus manganese, boron, iron, copper, zinc, cobalt and molybdenum. With the addition of extra manganese, ENC + Mn Xtra provides key crop nutrients for transgenic crops. Plus, the minor elements are chelated, which enhances their effectiveness and makes them less likely to cause crop injury.

After plant uptake of ENC's unique formulation, root growth is also enhanced. As a result, your crop benefits above and below the ground.

ENC + Mn Xtra also has a buffering effect on hard water. It helps adjust the pH of water and is compatible with fungicides, insecticides and herbicides, including all glyphosate products (read and follow label directions before mixing ENC + Mn Xtra with other products).

ENC + Mn Xtra reduces the risk of plugged spray nozzles due to chemical incompatibility. It also results in a more stable spray solution when mixed with other products, which improves pesticide efficacy. ENC + Mn Xtra can also be mixed with other NPK fertilizers.

- ***Rapid availability of applied nutrients—quicker plant response***
- ***Increased tank mix stability***
- ***Easy to use—saves time and labor***
- ***Superior quality with proper chelation for mixing with pesticides***
- ***Reduced risk of plugging spray equipment***

Contact your dealer or Helena representative for more information on ENC + Mn Xtra. Results you expect from a foliar fertilizer!
